medi. I feel better.

COMPRESSION for chronic venous disease and PAD / Diabetes?

Merino-Plush in the entire foot

Solid ribbed structure

Unique, soft padding from above the ankles down to the tip of the toes

Extra long, flat seam

Yes, certainly!*

mediven® angio – Safety down to the toes

Safety in clinical trial proven[1]

mediven® angio

Safety down to the toes.

* Product safety proven by clinical trial: The use of the medical compression stocking mediven angio in patients with chronic venous diseases and concomitant mild to moderate peripheral artery disease (PAD) and / or Diabetes mellitus is safe.[1]

[1] Rother U et al. Safety of medical compression stockings in patients with diabetes mellitus or peripheral arterial disease. BMJ Open Diab Res Care 2020;8:e001316.

The medi treatment traffic light

For a simple, safe and indication-appropriate treatment.

Step 1: Determine the indication and evaluate comorbidities

Step 2: Consider patient-individual criteria and comorbidities

Chronic venous disease (CEAP C0s – C5)

approx. 98 % of the over 60-year-old[1]

Clinical diagnosis
- Venous reflux
- Venous hypertension

✔ Compression therapy with **mediven® round knit** (e. g. mediven® plus) – **patientindividual care**

Chronic venous disease (CEAP C0s – C5) and mild to moderate PAD

approx. 21 % of the over 65-year-old[2]

Further clinical diagnosis[2,3]
- Pain in the calfs while walking longer distances (so called window shopper's disease)

Chronic venous disease (CEAP C0s – C5) and diabetes mellitus Type 2 / diabetic PNP

approx. 20,5 % of the over 60-year-old[4]

Further clinical diagnosis
- Missing sensibility of pressure
- Missing sensibility of pain

✔ Compression therapy with **mediven® angio** – **safe care**

✔ **Unique product**
- Merino-Plush in the entire foot area
- Solid ribbed structure
- Extra long, flat seam

✔ **Clinical trial**
- Stable blood circulation down to the smallest blood vessels
- No damage to the skin
- No constrictions
- No pressure points
- High wearing comfort

Confirmed for compression classes 1 and 2

Safety in clinical trial proven[5]

Chronic venous disease and severe PAD

✘ **Contraindication** for compression therapy[3]

Chronic venous disease and diabetic foot syndrome (DFS)

✘ **No treatment** with medical compression stockings

medi
World of
Compression
since 1951

Driving the future in compression therapy

A strong brand. A wide-ranging product range. Convincing concepts.

medi World of Compression: signpost to the future with more than 70 years' competence in the field of compression. Your partner for the highest demands on quality, innovation and design. Let's shape the future together and create positive brand experiences – for you and your clients!

Satisfied customers and new potential

Numerous possible combinations for more successful treatment.

mediven compression garments are available in many colours and variants. So medi offers the right garment for several phlebological indications. The broad assortment of add-ons helps patients enjoy wearing their stockings. Join medi in profiting from partner-like goodwill and helpful services.

medi World of Compression

medi convinces within compression by a holistic concept. For this reason you can trust in medi products. They are tailored down to the smallest detail to the needs of your customers and promise best possible treatment success.

To introduce you to medi World of Compression we created indication related catalogues. This enables you to find the correct product for all the different indications and situations in no time. Please find a short explanation of the different literature below:

Venous Health
mediven round-knit compression stockings are the cornerstone of the conservative treatment for patients with venous disorders. Discover more about the numerous styles and variants of mediven and circaid products for venous health.
Art. no.: 0097D67

Therapy Concept Lymphology
The medi Therapy Concept Lymphology shows the new approach in the treatment of lymphoedema. It combines the decongestion phase, the transition phase and the maintenance phase and provides the right products for every stage. The circaid and the mediven flat knit products make the treatment of lymphoedema more indidvidual than ever before.
Art. no.: 0098D50

Therapy Concept Leg Ulcer
The medi Therapy Concept Leg Ulcer accompanies the patient during the complete treatment of venous leg ulcer by connecting the acute phase to the prevention of recurrence phase.
Available as pdf only.

Clinical Compression
The world of Clinical Compression is more than just thrombosis prophylaxis in the clinical environment.
Learn more about the multiple application fields of medi's hospital products and benefit from over 40 years of experience with Clinical Compression.
Art. no.: 0099580

Service

More than just a manufacturer

medi produces medical aids for a variety of conditions and life situations. But we don't see ourselves solely as a manufacturer. On the contrary, we handle our own research and development, technology, production, marketing and sales in-house – always keeping our focus on the market, its demands and variables, and the medi vision.

medi offers products in three business divisions: Compression, Orthopaedics and Footcare. These products are used and distributed by medical supply stores, hospitals and clinics, doctors' practices and therapists.

In other words, specialists who know which users need which aids to improve their state of health and quality of life.

What we're proud of and what makes our products so special is that they're free of negative side effects.

Our range of products primarily includes medical compression stockings and adjustable compression for people with vein disorders, lipoedema and lymphoedema, supports and braces for the conservative and post-operative treatment of orthopaedic injuries and disorders, stockings for the prevention of thrombosis, anti-embolism stockings for use after vein surgery, compression garments for use after plastic and cosmetic surgery plus a variety of therapy-supporting products.

We support our partners in the sale and supply of our products and have developed intelligent concepts and services for this purpose.

Quality Certificates

As a manufacturer of medical products, medi has a high regard and awareness for quality. Product and system certificates prove that all legal requirements are met.

CE mark

Our medi medical devices meet all of the requirements of the European Directive 93 / 42 / EEC and of the German Medical Devices Act. In accordance with regulations, our products are subject to the conformity assessment procedures and are granted the CE mark. As a kind of "passport for industrial products", the CE mark guarantees free trade within the European Economic Area (EEA).

Quality label

Our medical compression hosiery is regularly checked by the Hohenstein Research Institute according to the quality and test provisions of the RAL-GZ 387. As confirmation that our products meet the quality conditions, you will find the quality label printed on the packaging.

Textile trust quality seal

All compression stockings and garments, whether circular-knit or flat-knit, thrombosis prophylaxis stockings and supports are regularly examined and rated according to strict standards by independent test centres for any toxic substances potentially damaging to human health. Granting of the Oeko-Tex Standard 100 certificate guarantees: tested quality for the protection of your health.

EN ISO 13485

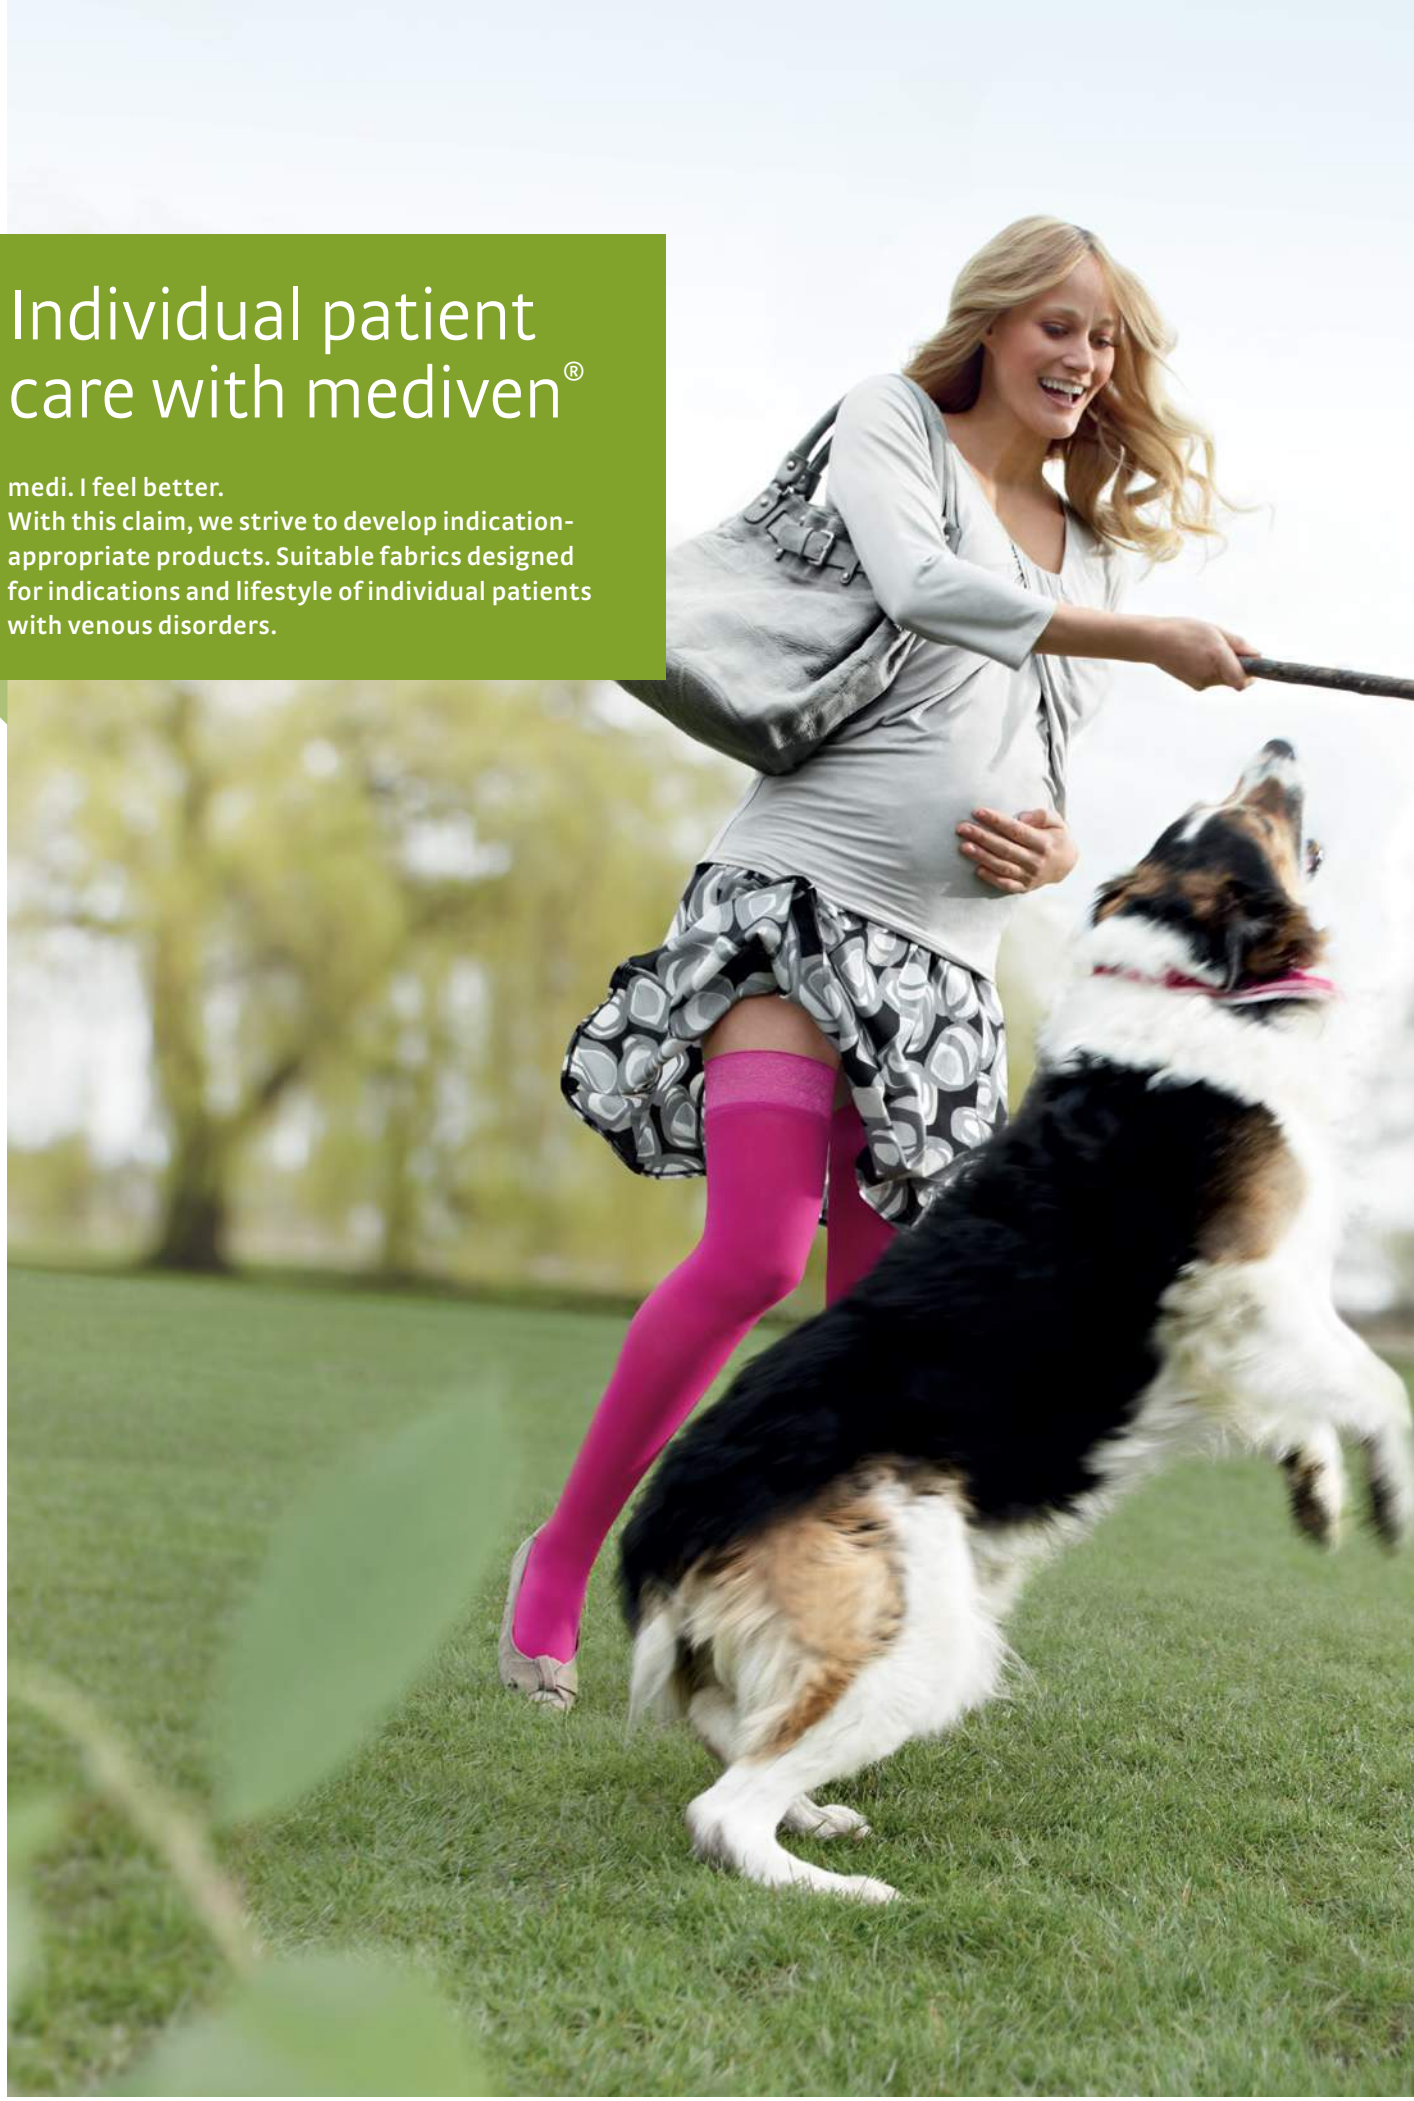
medi maintains the quality management system according to the EN ISO 13485. Since 1996 we have demonstrated our quality status to our customers with a certificate. Since then, medi has enhanced the opportunities offered by this standard to permanently improve products from the business units Phlebology, Orthotics, Footcare, Woundcare and Hospital in order to organise safer and more efficient processes and procedures. We define customer satisfaction as a decisive measure of quality.

Hohenstein testing device – HOSY

Pressure is the most important feature of a medical compression stocking.

Individual patient care with mediven®

medi. I feel better.
With this claim, we strive to develop indication-appropriate products. Suitable fabrics designed for indications and lifestyle of individual patients with venous disorders.



The mediven® observational study – facts and figures

The study proves: High acceptance of mediven® medical compression stockings. 1,2

High acceptance

Up to **98 %**
of patients

had no symptoms while wearing the medical compression stockings

Wearing comfort

More than **70 %**
of patients

considered the medical compression stockings to be comfortable

Improving symptoms

In up to **53.2 %**
of patients

the medical compression stockings improved the subjective symptoms

In **17.7 %**
of patients

the objective clinical findings improved according to the CEAP class*

Good compliance

Up to **75.6 %**
of patients

wore the medical compression stockings on a daily basis

Up to **68.4 %**
of patients

wore the medical compression stockings from morning until evening

[1] Schwahn-Schreiber, Christine et al. "Long-term observational study on outpatient treatment of venous diseases with medical compression stockings in Germany. Phlebologie 2016;45(1):15-24.
[2] Schwahn-Schreiber et al. Reality of outpatient care with medical compression stockings: Follow-up analysis of the mediven® observational study. Phlebologie 2016;45(4):207–214.
* CEAP: classification of chronic venous disorders

The gap between the medical care situation and patient-specific criteria

Medical care situation

Approx.
3/4
of patients
wore light-material medical compression stockings – regardless of their CEAP and BMI

Patient-specific criteria: weight

Approx.
2/3
of patients
were overweight or obese

The term "material" encompasses various textile characteristics of a medical compression stocking and is defined by strength, rigidity and elasticity of the knitted fabric.

The mediven observational study has shown patient-specific criteria are rarely taken into account when prescribing medical compression stockings.
Although two thirds of the patients were overweight or obese, 73.8 percent of compression stockings prescribed were made from light material. In people with higher weight frequent constrictions occured due to wearing medical compression stockings of light material.

2 steps to the perfect, individualised mediven compression stocking:

Step 1: Phlebological Indication Overview
Step 2: Consider patient-specific criteria

Step 1: Phlebological Indication Overview

medi compression aids improve

- venous symptoms including pain reduction
- quality of life for sufferers of chronic venous diseases

and the following indications are to be considered (highest level of recommendation):[1]

Indication		Product (CCL)	mediven sheer & soft (15-20 mmHg, 20-30 mmHg)	mediven elegance (1, 2)	mediven for men (1, 2)	
Chronic venous diseases according to CEAP						
C0s		No visible signs of a venous disease	●	●	●	
C1		Spider veins, telangiectasias, reticular varicose veins	●	●	●	
C2		Varicose veins with no signs of a CVI C2r recurrent varicose veins	●	●	●	
C3		Prevention of and therapy for venous oedema			●	
C4		Prevention and therapy of skin changes C4a Pigmentation, eczema C4b Lipodermatosclerosis, atrophy blanche C4c Corona phlebectatica				
C5		Healed venous ulcers (UCV), Prevention of UCV recurrence				
C6		Active UCV C6r recurrent active venous ulcer				
Other						
Therapy for mixed venous ulcer						
Other chronic venous diseases						
Initial phase following varicose therapy			●	●		
Functional venous insufficiency due to obesity						
Other oedemas						
Congestion complaints and oedema in pregnancy, postoperative reperfusion oedema, post-traumatic, postoperative, occupational oedema, medicinally induced oedema, oedema due to immobility					●	
Thromboembolism						
• Superficial venous thrombosis			●	●	●	
• Deep vein thrombosis						
• Condition after thrombosis, post-thrombotic syndrome						
• Thrombosis prophylaxis in mobile patients			●	●	●	
• Arm vein thrombosis						
Other indications						
• Inflammatory dermatoses of the legs				●	●	
• Nausea, dizziness in pregnancy				●		

Note:

1. It is important to consider the different materials of medical compression stockings (MCS): light, medium, strong material. The term 'material' includes different textile MCS characteristics (strength, rigidity and elasticity). The usage of the three materials depends on the patients' characteristics (e. g. body weight, oedema, severity of the venous disorder, connective tissue): Keep in mind: The higher the body weight and / or the stronger the venous oedema and / or the more severe the venous disorder and / or the softer the connective tissue the firmer the MCS material.

medi tip: In respect to indications, we refer to the current S2k Guideline Medical Compression Therapy of the German Society for Phlebology.[1]

[1] Rabe E et al. Medical compression therapy of the extremities with medical compression stockings (MCS), phlebological compression bandages (PCB), and medical adaptive compression systems (MAC): S2k guideline of the German Phlebology Society (DGP) in cooperation with the following professional associations: DDG, DGA, DGG, GDL, DGL, BVP. Hautarzt 2021;72(2):137-152.

	mediven comfort (1, 2)	mediven cotton (1, 2)	mediven plus (1, 2, 3)	duomed (1,2)	mediven active (1, 2)	mediven forte (2, 3)	mediven harmony (1, 2)	circaid juxtalite (20-30 / 30-40 / 40-50 mmHg)	mediven ulcer kit (2 x 20 mmHg)	circaid juxtacures (20-30/30-40 / 40-50 mm Hg)
	●	●	●	●	●	●				
	●	●	●	●	●	●				
	●	●	●	●	●	●				
	●	●	●	●	●	●		●		
	●	●	●	●	●	●		●

								●	●	●
								●	●	●
	●	●	●	●		●		●		
						●				
	●	●	●	●	●	●				
	●	●	●	●	●	●				
			●	●		●		●		
	●	●	●	●	●	●		●		
	●	●	●	●	●	●		●		
							●			
	●	●	●	●	●	●				
	●	●	●	●		●				

Decongestive potential

2. MCS of compression class I (CCL I) might be considered in elderly patients or in patients with an initial treatment, since it is well known, that the donning and doffing process of MCS is easier with CCL I compared to higher compression classes resulting in a better compliance.

Step 2: Consider patient-specific criteria

Recommendation – mediven® care compass:

- The higher the weight
- The stronger the oedema (venous oedema)
- The more severe the disease
- The softer the connective tissue

→ The stronger the stocking material should be.

→ Already meeting a single criterion requires a stronger material.

→ Please note! For lymphoedema or lipoedema, use mediven flat knit.

medi tip:

Safe care for concomitant diseases.
Customers with chronic venous disease and simultaneously

→ mild to moderate peripheral arterial disease (PAD) and / or

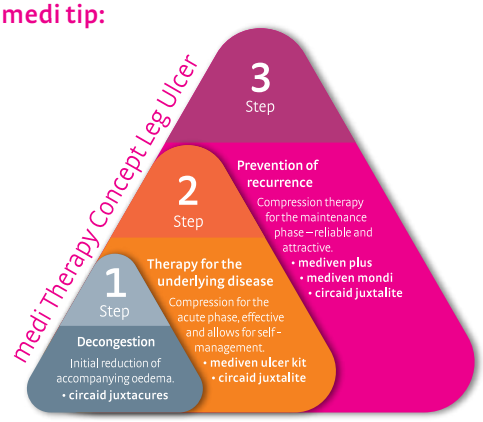
→ diabetes mellitus / diabetic polyneuropathy (PNP)

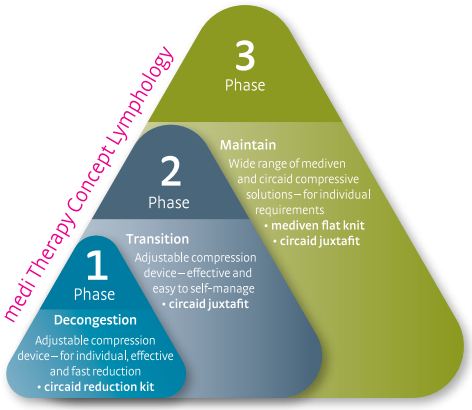
have special requirements for a medical compression stocking.
mediven angio was particularly developed for this purpose – and its safety was proven in a clinical trial. Actively ask your customers about these concomitant diseases.

Case example: Obese, mild disease and light oedema → strong material

Material / Criteria	Light (e.g., mediven elegance)
	1. Weight	
2. Oedema (venous oedema)	–
3. Severity of the disease	
Recommended mediven® compression stockings:	mediven sheer & soft mediven elegance mediven for men

medi tip:





For C5 and C6, please also consider the medi Therapy Concept Leg Ulcer.
medi.biz/wound

Please see the medi Therapy Concept Lymphology for the treatment of lip- and lymphoedema.

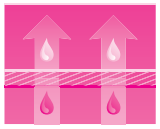
mediven® medical compression stockings

mediven round-knitted compression stockings are the cornerstone of the conservative treatment for patients with venous disorder. They are the basic form of therapy for patients with venous disorders.

In combination with a healthy lifestyle and physical activity, medical compression stockings improve the venous signs and symptoms. Your customers will soon notice that mediven compression stockings are good for them and their well-being, and that they are improving their quality of life.

mediven® product features



Clima Comfort

Clima Comfort*
- Wicks moisture away from the skin's surface quickly
- Guarantees a high level of breathability

Clima Fresh

Integrated Clima Fresh function
- Odour-inhibiting effect

Soft Elastic

Soft Elastic
- Noticeably more toe freedom with closed toe
- Increases wearing comfort
- Less pressure is exerted on the end of the foot

Perfect Fit

Perfect Fit
- A very precise fit
- Medically effective pressure gradient
- Optimal care conditions in standard and made-to-measure version

Variety

A wide range of variants and special models

Colours for greater quality of life
- Large selection of standard colours and the latest trend colours available.

Hightech fibres for natural elasticity
- High double-stretch elasticity
- Optimal user comfort
- Easy to put on and take off
- Perfect, wrinkle-free fit
- Highly attractive transparency and refined feeling

DERMATOLOGICALLY Particularly suitable for sensitive and atopic skin TESTED

cf. Ben Ammar, F. (Dermscan): Clinical evaluation of the skin compatibility of a medical device - application testing realized under dermatological control, Tunis 2012/2013.

OEKO TEX® STANDARD 100 96.0.1369/1 Hohenstein HTTI

OEKO TEX® STANDARD 100 97.0.3231 Hohenstein HTTI

***Clima Comfort**

* Scientifically tested by French institute IFTH[1]. The test results show that Clima Comfort technology from medi assures climate control between the skin and the stocking. With 11/12 points, medi achieved an outstanding overall score.

mediven® ulcer kit product features

Softness

Softness**
- Soft material for a pleasant wearing comfort
- Slides smoothly and gently over the skin

Easy donning

Easy donning***
- Liner and outer stocking with both 20 mmHg for easy donning and doffing
- Soft liner stocking eases donning of the outer stocking

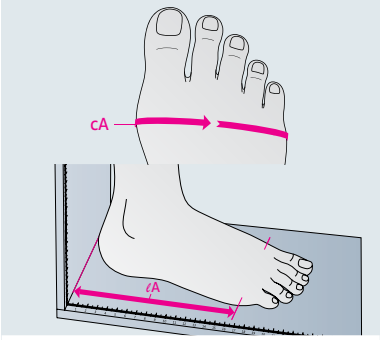
Clima Fresh

Integrated Clima Fresh function
- Odour-inhibiting effect

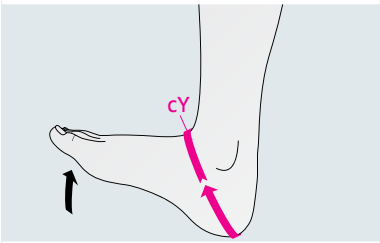
** These features only apply to mediven ulcer
*** These features only apply to mediven ulcer kit

Correct fitting of round knit medical compression stockings

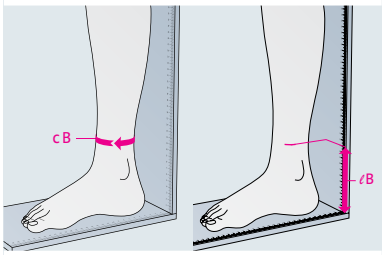
Note: Please measure length measurements to lG on the inside of the leg



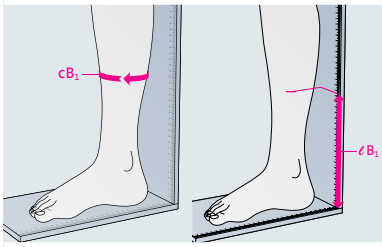
cA, ℓA, ℓZ
Take circumferential measurement **cA** just behind the joint at the base of the toes where the little toe begins. **The length of the foot for open toe stockings** is determined by the length measurement **ℓA** which is measured from the bottom of the heel to measurement point **cA**. **The length of the foot for closed toe stockings** is measured from the heel of the foot to the tips of the toes. **(ℓZ-measurement)**



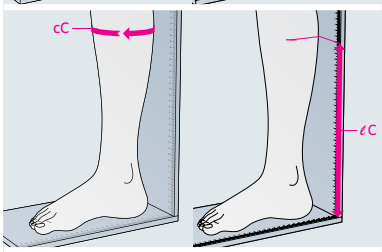
cY
Take the circumferential measurement **cY**, around the heel and the instep, with the foot in maximum dorsal extension.



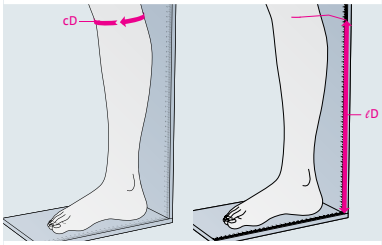
cB, ℓB
Take the circumferential measurement **cB** and length measurement **ℓB** at the narrowest circumference of the leg below the knee, directly above the ankle. This measurement above the ankle bones is especially important for selecting the stocking size, because the pressure here will be 100%.



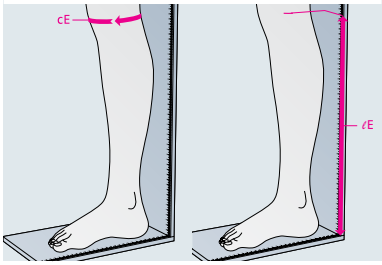
cB¹, ℓB¹
The circumferential measurement **cB¹** and the length measurement **ℓB¹** are at the point where the calf begins, or at the transition point to the Achilles tendon.



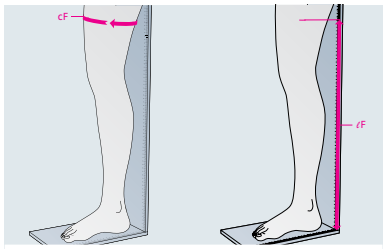
cC, ℓC
Take the **cC** and **ℓC** length measurements at the widest circumference of the calf.



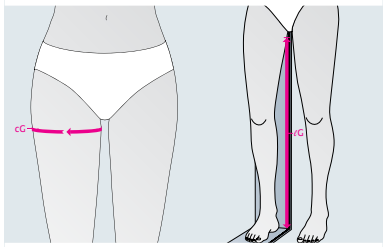
cD, ℓD
Take the circumference **cD** and length **ℓD** measurements about two finger-widths below the patella respectively one finger-width below the hollow of the knee.



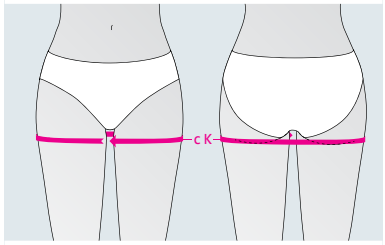
cE, ℓE
The circumferential measurement **cE** is the circumference of the knee measured through the hollow of the knee in the middle of the kneecap. Take the length measurement **ℓE** when the leg is straight.



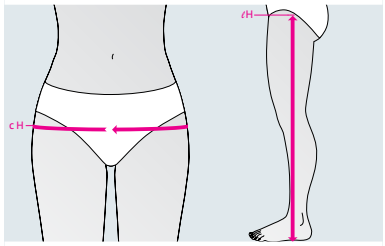
cF, ℓF
Circumferential measurement **cF** and length measurement **ℓF** are located where the inner thigh muscle begins or in the middle of the thigh.



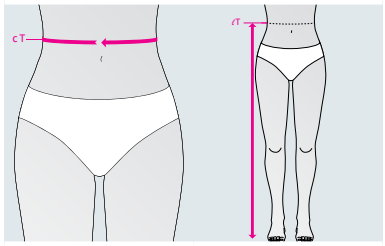
cG, ℓG
Take the **cG** and length measurement **ℓG** about 3 cm below the crotch.



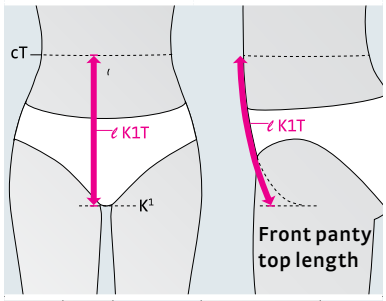
cK
Take the circumferential measurement **cK** at the height of the g measurement, around both legs.



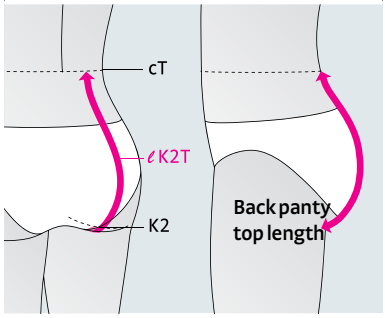
cH, ℓH
Take the circumferential measurement **cH** at hip level at the widest point of the buttocks.



cT, ℓT
Take the circumferential measurement **cT** round the waist.



Front panty top length
Measure from the crotch to the waist. It is however more comfortable for the patient if you go 3 cm to the side of the crotch and measure the panty top length from there.



Back panty top length
Measure from the gluteal fold to the waist. If the patient requests a longer or shorter panty top, you must measure to the length the patient requests. The "waist" point is only the standard length.

mediven sheer & soft®

medi's most translucent compression stocking. Try a major advance in compression therapy. mediven sheer & soft takes comfort to a whole new level. Yet these compression stockings are so sheer that only you will know that they are medical compression stockings.

mediven sheer & soft®

medi's most translucent compression stocking.

medi tip[1]:
Due to the material thickness, the fit and the product characteristics, we recommend mediven sheer & soft for:
- Women
- Normal weight
- No tendency to venous oedema
- Firm connective tissue

Indications[2]
- Chronic venous: disease stages C0s to C2r according to CEAP
- Initial phase after varicose vein therapy
- Superficial venous thrombosis Thrombosis prophylaxis in mobile patients

Features
- Extremely sheer, not distinguishable from fashion stockings
- Soft and gentle on the skin
- Available with open toe[3]

Attractive topband

Knee length stocking (AD)

Panty (AT)

Open toe – detail

[1] Please note that this recommendation does not replace a doctor's diagnosis or professional advice from a specialist medical retailer.
[2] Selecting the ideal compression stockings depends on the indication and the individual needs of the patients.
[3] mediven sheer & soft, open toe in Ebony: delivery period up to 7 weeks.

mediven elegance®

Is this really a medical compression stocking? For sure! This is a model that emphasises a woman's beauty. The mediven elegance pampers the legs with its compressive effect. In doing so, it nestles against the leg like a second skin. It can be combined with any item of clothing and perfectly accentuates the female figure. True to the motto: Beauty that can be seen.

mediven elegance. Effective compression has never looked so good.

mediven elegance®

All you see is beauty.
Effective compression has never looked so good.

medi tip[1]:
Due to the material thickness, the fit and the product characteristics, we recommend mediven elegance for:
- Women
- Normal weight
- No tendency to venous oedema
- Firm connective tissue

Indications[2]
- Chronic venous disease stages C0s – C2r according to CEAP
- Initial phase following varicose therapy
- Superficial venous thrombosis
- Thrombosis prophylaxis in mobile patients
- Inflammatory dermatoses of the legs
- Nausea and dizziness in pregnancy

Features
- Transparent fine stocking style
- Soft Elastic foot tip guarantees more freedom for the toes
- Wide and soft cuff for knee length style
- Smaller heel for wrinkle-free fit
- Attractive topband motifs for thigh-length stockings

Washing instructions
Easy care
Suitable for washing machine and drier.

Soft elastic foot tip

Knee length stocking (AD) with soft cuff

Plain silicone topband rose (FBR)

[1] Please note that this recommendation does not replace a doctor's diagnosis or professional advice from a specialist medical retailer.
[2] Selecting the ideal compression stockings depends on the indication and the individual needs of the patients.

mediven®
for men

It's generally more difficult to convince men to wear medical compression than women. However, the arguments of mediven for men speak for themselves and will help you.

This compression socks looks like a fashionable men's sock and is the perfect accompaniment for men. The stylish sock in a "business ribbed design" feels like a second skin.

mediven for men. For the fashionable business look.

mediven® for men

The elegant compression sock.

medi tip[1]:
Due to the material thickness, the fit and the product characteristics, we recommend mediven for men for:
- Men
- Normal weight
- No / light tendency to venous oedema
- Also for soft connective tissue

Indications[2]
- Chronic venous disease stages C0s – C3 according to CEAP
- Postoperative reperfusion oedema
- Post-traumatic, postoperative, occupational, medicinally induced oedema
- Oedema due to immobility
- Superficial venous thrombosis
- Thrombosis prophylaxis in mobile patients
- Inflammatory dermatoses of the legs

Features
- Anatomical toe design with practical right/left markings for a perfect fit and user comfort
- Stylish Business Rib Design
- Added lanolin[3]
- Clima Fresh for long-lasting freshness on the leg and foot
- Extra-wide and especially soft comfort cuff
- Suitable for shoe sizes 39 – 46

Washing instructions
Easy care
Suitable for washing machine and drier.

Knee length sock (AD) in fashionable Business Rib Design with comfort cuffs

Anatomically shaped foot with right and left markings

[1] Please note that this recommendation does not replace a doctor's diagnosis or professional advice from a specialist medical retailer.
[2] Selecting the ideal compression stockings depends on the indication and the individual needs of the patients.
[3] Natural substance used to care dry and chapped skin, has a broad range of applications, for example in child care and baby care.

mediven comfort®

mediven comfort is made of wonderfully soft material. The stocking in compression classes 1 and 2 makes the therapy and treatment of venous disorders as comfortable as possible. Thanks to its lanolin finish, it cares for the skin and treats it particularly gently. How do you win over your customers for mediven comfort? Let them feel for themselves!

mediven comfort. The cuddly side of compression.

mediven comfort®

All you feel is softness.
The cuddly side of compression.

medi tip[1]:
Due to the material thickness, the fit and the product characteristics, we recommend mediven comfort for:
- Women
- Normal weight / overweight[2]
- Light to severe tendency to venous oedema[2]
- Firm connective tissue

Indications[3]
- Chronic venous disease stages C0s – C4 according to CEAP
- Initial phase following varicose therapy
- Congestion problems and oedema during pregnancy
- Postoperative reperfusion oedema
- Post-traumatic, postoperative, occupational, medicinally induced oedema
- Oedema due to immobility
- Superficial venous thrombosis
- Condition after thrombosis, post-thrombotic syndrome
- Thrombosis prophylaxis in mobile patients
- Inflammatory dermatoses of the legs
- Nausea and dizziness in pregnancy

Features
- Particularly soft material for easy donning and doffing
- Added lanolin[4]
- Double-knitted comfort sole for that enhanced feeling of comfort when walking

- Shaping comfort panty top
- Elastic and hard-wearing comfort gusset

Washing instructions
Easy care
Suitable for washing machine and drier.

[1] Please note that this recommendation does not replace a doctor's diagnosis or professional advice from a specialist medical retailer.
[2] Use mediven comfort for serious oedema only for patients with normal weight. For people who are overweight and have severe oedema, medi recommends stronger materials to prevent lace-up grooves.
[3] Selecting the ideal compression stockings depends on the indication and the individual needs of the patients.
[4] Natural substance used to care dry and chapped skin, has a broad range of applications, for example in child care and baby care.

Feel the difference.
Make a difference.

mediven® cotton

mediven cotton is the first medical compression stocking with organic cotton from medi. The combination with functional fibres provides a thermoregulating effect. The natural fibre cotton is considered particularly soft – and therefore suitable for sensitive and allergic skin which has been dermatologically tested and given top marks. The use of organic cotton and recycled polyamide yarn provides additional benefits for the environment and the people involved.

mediven cotton. Naturally well cared for.

mediven® cotton

Naturally well cared for.

medi tip[1]:
Due to the material thickness, the fit and the product characteristics, we recommend mediven cotton for:
- Women / men
- Normal weight / overweight
- Light to heavy tendency to venous oedema
- Also for soft connective tissue

Indications[2]
- Chronic venous disease stages C0s – C4 according to CEAP
- Initial phase following varicose therapy
- Congestion problems and oedema during pregnancy
- Postoperative reperfusion oedema
- Post-traumatic, postoperative, occupational, medicinally induced oedema
- Oedema due to immobility
- Superficial venous thrombosis
- Condition after thrombosis, post-thrombotic syndrome
- Thrombosis prophylaxis in mobile patients
- Inflammatory dermatoses of the legs
- Nausea and dizziness in pregnancy

Features
- First medical compression stocking with organic cotton – lined on the inside of the stocking for direct skin contact
- Polyamide yarn with recycled content for effective and resource-saving compression

- Thermoregulating effect – cooling in hot temperatures and warming in cold weather
- Ideal compression solution for patients with atopic and sensitive skin – dermatologically proven via dermatest
- Opaque look

Washing instructions
Easy care
Suitable for washing machine and drier.

mediven® plus

mediven plus has been established for over 40 years and caters for a variety of indications for men and women. The proven medical compression stocking in the compression classes 1, 2 and 3 with additional plus points can be relied upon, no matter what. True to the motto: Reliability that endures.

mediven plus. Compression has never proven so trustworthy.

mediven® plus

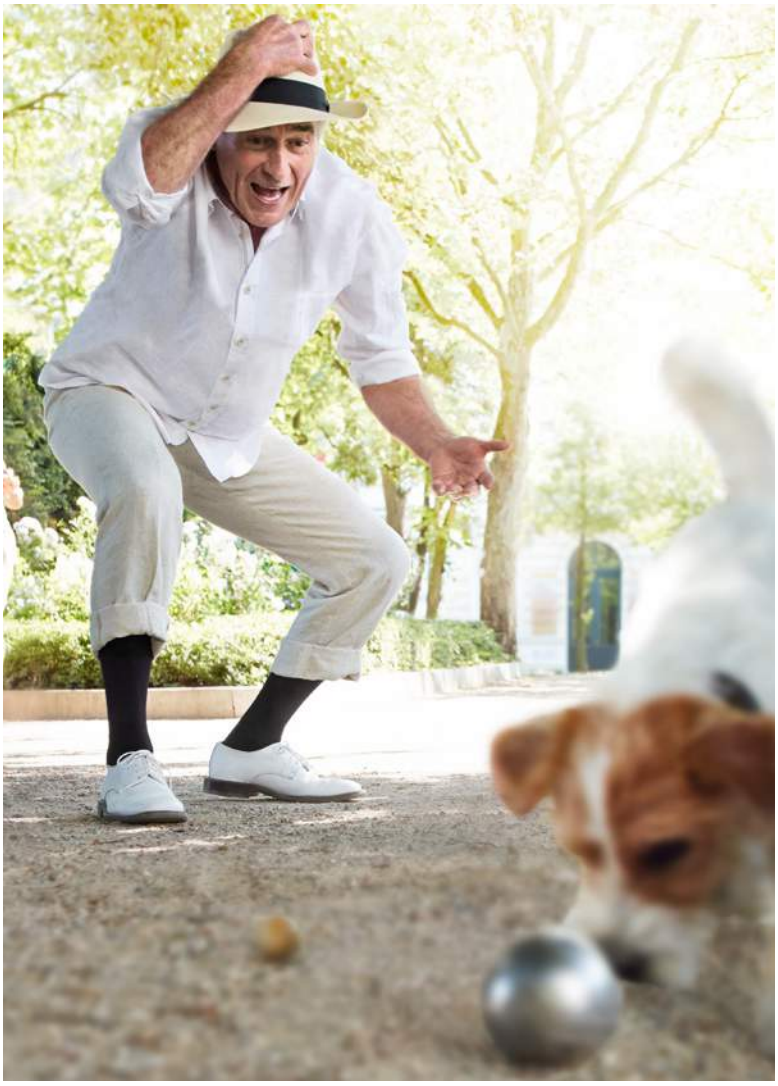
All you experience is reliability. Compression has never proven so trustworthy.

medi tip[1]:
Due to the material thickness, the fit and the product characteristics, we recommend mediven plus for:
- Women / men
- Normal weight / overweight
- Light to heavy tendency to venous oedema
- Also for soft connective tissue

Indications[2]
- Chronic venous disease stages C0s – C5 according to CEAP
- Initial phase following varicose therapy
- Congestion problems and oedema during pregnancy
- Postoperative reperfusion oedema
- Post-traumatic, postoperative, occupational, medicinally induced oedema
- Oedema due to immobility
- Superficial venous thrombosis
- Deep leg vein thrombosis
- Condition after thrombosis, post-thrombotic syndrome
- Thrombosis prophylaxis in mobile patients
- Inflammatory dermatoses of the legs
- Nausea and dizziness in pregnancy

Features
- Very hard-wearing and opaque
- Optimal fit thanks to the plus heel, optimised toe, ribbed sole reinforcement and wide cuff
- Especially recommended for heavier thighs
- Maxi panty top as standard version

Washing instructions
Easy care
Suitable for washing machine and drier.



Maxi panty top as standard

Plus-heel and sole reinforcement

Wide cuff

mediven® active

Men who move around a lot, for example for professional reasons, need a robust medical compression stocking. It must withstand high loads and fit perfectly in the shoe. The men's stocking in a sporty fine-ribbed look is very soft and under no circumstances can it be recognised as a medical compression stocking. Show your male customers that there are compression stockings that also look masculine.

mediven active. For the active man.

mediven® active

The hard wearing compression sock.

medi tip[1]:
Due to the material thickness, the fit and the product characteristics, we recommend mediven active for:
- Men
- Normal weight / overweight
- Light to heavy tendency to venous oedema
- Also for soft connective tissue

Indications[2]
- Chronic venous disease stages C0s – C4 according to CEAP
- Postoperative reperfusion oedema
- Post-traumatic, postoperative, occupational, medicinally induced oedema
- Oedema due to immobility
- Superficial venous thrombosis
- Condition after thrombosis, post-thrombotic syndrome
- Thrombosis prophylaxis in mobile patients
- Inflammatory dermatoses of the legs

Features
- Imperceptible and barely visible seam
- Fine-ribbed design – barely distinguishable from men's socks
- Comfort sole with heel reinforcement, withstands even the toughest conditions
- Soft and wide cuff for increased wearing comfort
- Very robust knitted fabric
- Suitable for shoe sizes 38 – 48

Washing instructions
Easy care 40°
Suitable for washing machine and drier.

Foot tip without seam

Comfort sole

mediven® forte

This stocking keeps chronic indications in check. After all, it is all about ensuring that customers with significant vein issues actively participate in life while accepting as few compromises as possible.

The mediven forte delivers maximum pressure stability throughout the day. Its strong material achieves the required depth effect. The stocking is also very hard-wearing and durable.

mediven forte. Pleasant compression has never been so powerful.

mediven® forte

**All you feel is protection.
Pleasant compression has never been so powerful.**

medi tip[1]:
Due to the material thickness, the fit and the product characteristics, we recommend mediven forte for:
- Women / men
- Overweight / obese
- Light to heavy tendency to venous oedema
- Also for soft connective tissue

Indications[2]
- Chronic venous disease stages C0s – C5 according to CEAP
- Initial phase following varicose therapy
- Functional venous insufficiency due to obesity
- Congestion problems and oedema during pregnancy
- Postoperative reperfusion oedema
- Post-traumatic, postoperative, occupational, medicinally induced oedema
- Oedema due to immobility
- Superficial venous thrombosis
- Deep leg vein thrombosis
- Condition after thrombosis, post-thrombotic syndrome
- Thrombosis prophylaxis in mobile patients
- Inflammatory dermatoses of the legs
- Nausea and dizziness in pregnancy

Features
- Extremely hard-wearing seamless material for optimum wearing comfort
- Maximum pressure stability (high working pressure for a deep functional effect)
- Stable soft cuff at the AD finish
- Opaque
- Clima Fresh over the whole leg for a feeling of freshness around the clock
- Two foot-lengths for series with foot tip:
  - Small foot up to 23 cm
  - Large foot from 23 cm

Washing instructions
Easy care
Suitable for washing machine and drier.

COMPRESSION for chronic venous disease and PAD / Diabetes?

Merino-Plush in the entire foot

Solid ribbed structure

Unique, soft padding from above the ankles down to the tip of the toes

Extra long, flat seam

Yes, certainly!*

mediven® angio – Safety down to the toes

safety in clinical trial proven[1]

mediven® angio

Compression therapy in patients with venous disorders and concomitant diseases, have special requirements for a compression stocking. Therefor mediven angio was particularly developed and is the optimum solution for patients with chronic venous disease and comcomitant peripheral arterial disease (PAD) and / or diabetes mellitus.

This compression stocking is unique. mediven angio is the first and only medical compression stocking whose safety was scientifically evaluated and proven in patients with chronic venous disease and concomitant mild to moderate PAD and / or diabetes mellitus.[1]

mediven angio. Safety in treatment – down to the toes.

mediven® angio

Safety in treatment – down to the toes.

medi tip[2]:
Due to product features and the results of the clinical trial[1] we recommend mediven angio for:

- Women / men with chronic venous disease
- Concomitant mild to moderate peripheral arterial disease (PAD)
- Concomitant Diabetes mellitus

Indications[3]

- Chronic venous disease stages C0s – C5 according to CEAP

Features

- Unique and soft merino-plush padding in the entire foot
- Natural merino wool for optimum thermoregulation and additional wearing comfort
- Extra long and flat seam clings to the toes and thus forms an anatomic tip shape for optimum pressure relief at the toes and their base joints
- Solid ribbed structure for an ideal balance of resting- and working pressure and as a visual guide for the correct application
- Micro-plush in the entire lower leg for a high wearing comfort
- 90°-heel ensures an even distribution of the knitted fabric in the heel and instep area

Washing instructions

Easy care

Suitable for washing machine and drier

Unique novelty

mediven® angio – the first and only medical compression stocking whose safety was scientifically evaluated and proven in patients with chronic venous disease and concomitant PAD and / or diabetes mellitus.*

Unique product features
mediven angio was particularly developed for patients with chronic venous disease and mild to moderate PAD and / or diabetes mellitus and optimally adapted to their needs.

Unique safety
In a clinical trial[1] with both types of patients, the safety of mediven angio was evaluated and scientifically proven:

- ✔ Stable blood circulation down to the smallest blood vessels
- ✔ No damage to the skin
- ✔ No constrictions
- ✔ No pressure points
- ✔ High wearing comfort

Confirmed for compression classes 1 and 2

* Product safety proven by clinical trial: The use of the medical compression stocking mediven angio in patients with chronic venous diseases and concomitant mild to moderate peripheral artery disease (PAD) and / or Diabetes mellitus is safe.[1]

1 Rother U et al. Safety of medical compression stockings in patients with diabetes mellitus or peripheral arterial disease. BMJ Open Diab Res Care 2020;8:e001316.

medi special models round knit

Special versions are all variants of the stocking fabrics that are available above and beyond the standard range of mediven fabrics. This overview will help you choose and offer the right add-on in order to provide the best solution for every unique patient and make it easier for you to hold active sales talks. Special versions of mediven take into account the individuality of patients with venous disease and ensure pleasant and comfortable wear combined with easier treatment. Compliance means high patient loyalty to treatment! Increase your chance of successful repeat sales and thus long-term customer loyalty.

mediven®
Gusset variants

Gussets are knitted into the groin area of compression pantyhose. The following pages will give you an overview of the "standard gusset" that is used in all the round knit models.

In addition to this, you can choose from further gusset variants for standard sizes and made-to-measure garments for your customers, since a size in centimetres says little about the anatomy of patients with venous disease or the relationship between abdomen and bottom. Besides the pictures, a description simplifies the correct choice of gusset. The optimum compression pantyhose gives the wearer absolute comfort in the panty top.

mediven® Gusset standard variants

Standard Gusset	mediven elegance	mediven comfort	mediven cotton	mediven plus	mediven forte

mediven® ulcer kit

Therapy for leg ulcer requires a sophisticated therapy concept. With the mediven ulcer kit patients suffering from a leg ulcer can be treated efficiently. The ulcer kit consists of two components worn on top of each other: the mediven ulcer and mediven ulcer plus. The liner as well as the outer stocking each provide 20 mmHg and thus allow for a therapeutically effective compression therapy day and night.

24/7
Effective compression · 40 mmHg during the day · Effective compression · 20 mmHg during the night ·

mediven® ulcer kit

Ulcer stocking system with 2 x 20 mmHg for effective compression therapy for up to 24 hours a day.[1, 2]

medi tip*:
Due to product features we recommend mediven ulcer kit for:
- Women / Men
- After initial oedema decongestion
- Suitable for 24 hour compression therapy

Indications[2]
- Therapy of venous leg ulcer (CEAP Classification C6)
- Therapy for recurrent venous ulcer (CEAP classification C6r)
- Therapy for mixed ulcers (due to arterial and venous issues), taking the contraindications into account
- Prevention of recurrence of venous leg ulcer (CEAP Classification C5)

Features
- Already offers effective therapy overnight[1,2]
- Easy donning liner stocking material makes application of outer stocking easier[3]
- Odour-inhibiting effect of the liner stocking allows for optimum hygiene
- Refined appearance
- Pleasant wearing comfort whilst good durability
- Fullfills the EWMA** requirements regarding therapeutical necessary pressure (40 mmHg)[4]
- High wall stability thanks to double layer

Washing instructions
Liner stocking: 95 ⊗
Outer Stocking: 40 ⊗
Suitable for washing machine and drier.

Note

For more information and donning video please visit:
www.medi.biz/ulcerkit

Basic care of medi

duomed® and duomed smooth are the economic solutions for a reliable compression therapy. The cooperative partnership with medi enables you to address all customer needs and cover the complete product range of basic care, mediven quality products and premium special models. Simply obtain everything from medi through one provider.

duomed®

The economic solution for venous problems.

medi tip[1]:
Due to the material thickness, the fit and the product characteristics, we recommend duomed for:
- Women / men
- Overweight / obese
- Light to heavy tendency to venous oedema
- Also for soft connective tissue

Indications[2]
- Chronic venous: disease stages C0s to C4 according to CEAP
- Initial phase after varicose vein therapy
- Oedema during pregnancy
- Postoperative reperfusion oedema
- Post-traumatic, post-operative, occupational, drug-related oedema
- Oedema due to immobility
- Superficial venous thrombosis
- Condition after thrombosis, post-thrombotic syndrome
- Thrombosis prophylaxis in mobile patients
- Inflammatory dermatoses of the legs
- Nausea, dizziness during pregnancy

- **Features**
- Combines ideal wearing properties and appropriate medical compression
- Your economic solution for a reliable compression therapy

Knee length stocking (AD) with closed toe

Thigh length stocking (AG) with closed toe

Panty (AT) with open toe

[1] Please note that this recommendation does not replace a doctor's diagnosis or professional advice from a specialist medical retailer.
[2] Selecting the ideal compression stockings depends on the indication and the individual needs of the patients.

For all closed toe stockings:
only one highly elastic foot size

duomed smooth

Shining beauty for your legs.

medi tip[1]:
Due to the material thickness, the fit and the product characteristics, we recommend duomed smooth for:
- Women
- Normal weight
- No / light tendency to venous oedema

Indications[2]
- Chronic venous: disease stages C0s – C3 according to CEAP
- Postoperative reperfusion oedema, post-traumatic, postoperative, occupational oedema, medically induced oedema
- Oedema due to immobility
- Initial phase following varicose vein therapy
- Superficial venous thrombosis
- Thrombosis prophylaxis in mobile patients
- Inflammatory dermatoses of the legs
- Nausea and dizziness in pregnancy

Features
- Economic and trendy
- Appropriate medical compression
- Smooth and slightly shiny material

mediven harmony®

The comfortable "no seam" armsleeve is suitable for post-traumatic oedema.

mediven harmony®

Comfortable round-knitted armsleeve.

Indications[1]

- Arm vein thrombosis
- Post-operative and post-traumatic oedema (medi note: not suitable for pronounced oedema!)

Product features

- The double ellipses on the point and in the crease of the elbow offer freedom of movement. To reduce wrinkles to a minimum to prevent soreness.
- The anatomical shape of the armsleeve ensures easy and correct donning and doffing
- The silicone topband is knitted to the armsleeve with a flat and inconspicuous seam which secures hold whilst retaining air permeability.
- The skin feels comfortable all year round with Clima Comfort
- Added lanolin[2]
- UV protection factor 80

[1] The garment model and the strength of pressure required, i.e. the compression class, depend on the diagnosis, the treatment site, the clinical findings and the patient's susceptibility to oedema. Please also consider the patient's individual requirements and the circumstances (comorbidities, mobility, BMI, state of their skin and tissues, etc.).
[2] Natural substance for the treatment of dry and rough skin, used in many ways, for example in child and baby care. Nourishing protective effect remains even after washing.

circaid® adjustable compression

Adjustable compression garments for the treatment of venous diseases.

circaid garments are a compressive solution for those patients who have challenges with the established medical compression stockings.
Its easy donning and doffing process promotes self-management and thus an increased patient concordance as well as an improved quality of life.
The ability to instantly readjust the circaid system helps to consistently apply compression to a limb and avoids sliding down of the garment for better treatment outcomes and satisfied patients.

Compression therapy by the specialist

medi offers the most comprehensive line of compression garments for individual needs.

The inelastic range of circaid is the cost-effective alternative to short stretch and multi-layer bandage systems. circaid products guarantee a constant compression level and feature a fast and easy donning and doffing system. The ability to instantly readjust the circaid system helps to consistently apply compression to a reducing limb. This is not possible with bandaging without completely removing the layers. circaid garments promote self-management and thus an increased patient compliance as well as an improved quality of life.

Inspiration by nature.

circaid products have an animal role model: the giraffe with its specific skin structure. Giraffes have venous pressures of more than 250 mmHg at their front and hind legs – three times more than humans. But they do not suffer from lymphoedema or venous diseases, even though they are on their feet the whole day and sometimes also sleep while standing. But why? In contrast to humans, giraffes have inelastic skin, meaning it does not stretch.* The founder of circaid was inspired from this "natural compression" and designed the first patented inelastic circaid leg garment.
This first garment has been further developed to today´s circaid products (short for circulation aid).

* Sathar F, Ludo Badlangana N, Manger PR. Variations in the thickness and composition of the skin of the giraffe. Anatomical record 2010;293(9):1615-1627.

- Inspired by nature

OEKO TEX® STANDARD 100
16.0.87402
Hohenstein HTTI
www.oeko-tex.com

circaid® Built-In-Pressure® System (BPS)

circaid inelastic compression garments are engineered with the ability to be set to precise compression ranges with a graduated compression profile from the ankle up the leg.

The user-friendly design of the circaid Built-In-Pressure System (BPS) enables patients to achieve the necessary compression ranges needed for the treatment and management of chronic venous disease.

With the circaid Built-In-Pressure System (BPS) guide card patients are able to set their prescribed compression range while donning their garment and to readjust the compression range during the day as needed. Therefore, the appropriate compression range is ensured throughout the period of wear. Simultaneously, it is very simple to verify the correct range of applied pressure.

CALF

circaid® juxtacures®

Adjustable compression device for decongestion of the lower leg – the alternative to traditional compression bandaging.

medi tip*

Due to product features we recommend circaid juxtacures for:

- Women / men
- Initial decongestion of phleboedema and phlebo-lymphoedema
- Up to 24 hour compression therapy
- Mobile / immobile patients

Indications

- Chronic venous insufficiency
  - Varicose veins
  - Lipodermatosclerosis
  - Venous leg ulcer / mixed leg ulcer
- Deep vein thrombosis / thrombosis prevention
- Acute deep vein thrombosis
- Post thrombotic syndrome
- Post sclerotherapy
- Dependent oedema

Product features

- Easy handling – simple donning and doffing
- Customisable to the patient´s individual circumferences and shape
- Adjustable to reducing leg circumferences during decongestion
- circaid Built-In-Pressure System (BPS): adjustable, measurable and re-adjustable compression – 85 % of users reached the targeted compression value after first instruction[1]
- Odour-inhibiting effect
- Re-adjusting the individual bands avoids pressure loss and thus sliding down of the garment – supporting oedema reduction effectively[2]
- Also available with new compressive undersock
  - Applies graduated compression to the foot and ankle
  - Graduated compression continues into the leg portion of the undersock

Benefits

- Easy handling – time-saving and less susceptible to error[1]
- Compression – essential part of guideline-compliant treatment of venous leg ulcer
- Cost savings due to faster healing rates[2]
- Increased patient-concordance: 94.6 % of the users experience the wearing comfort as pleasant[1]
- Increased mobility: possibility of wearing regular footwear[1]
- Promotes self-management thanks to easy handling
- Cost- and time-saving compared to compression bandages:[3]
  - Cost reduction of wound dressings: 55.5 %
  - Cost reduction of compression material: 72.3 %
  - Reduction of nursing time: 58.7 %

Adjustable compression

20 – 30 mmHg
30 – 40 mmHg
40 – 50 mmHg

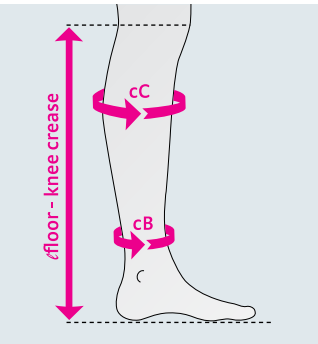
Measurement chart



Circumferences in cm		
Adjustable garment to cut according to individual cicrumferences.		
Circumference measurements in cm	**Minimum**	**Maximum**
cB	19	42
cC	25	64

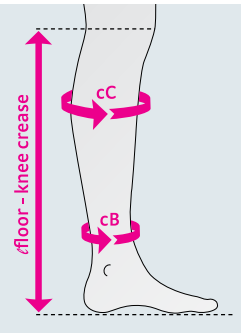
Length measurement in cm	Short	Standard	Long
ℓ floor – knee crease	< 49	44 – 49	> 49

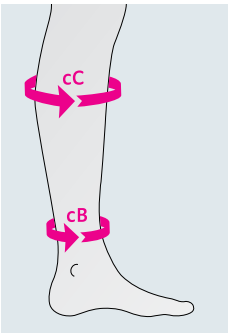
All garments contain the circaid Built-In-Pressure System (BPS).

Determining the correct length

4 easy steps to create an individualised garment

Measure length ℓfloor – knee crease → Measuring circumferences cB, cC → Adjusting the garment to fit the circumferences → Applying the garment → Setting the compression range





circaid® juxtalite®

Adjustable compression garment for treating venous diseases after initial oedema decongestion.

medi tip*:
Due to product features we recommend circaid juxtalite for:
- Women / men
- Patients who have challenges with medical compression stockings
- 24 hour compression therapy
- Mobile / immobile patients

Indications
- Chronic venous insufficiency
  - Varicose veins
  - Lipodermatosclerosis
  - Venous leg ulcer / mixed leg ulcer
- Deep vein thrombosis / thrombosis prevention
- Acute deep vein thrombosis
- Post thrombotic syndrome
- Post sclerotherapy
- Dependent oedema

Product features
- Easy handling – simple donning and doffing
- circaid Built-In-Pressure System (BPS): adjustable, controllable and re-adjustable compression
- Breathe-O-Prene: breathable material with high working pressure
- Odour-inhibiting effect
- Re-adjustability of the individual bands avoids pressure loss and thus sliding down of the garment[1,2]
- Also available with new compressive undersock
  - Applies graduated compression to the foot and ankle
  - Graduated compression continues into the leg portion of the undersock

Benefits
- Offering an alternative therapy concept for patients who are not able to apply or tolerate ulcer compression stockings
- Faster healing rates of venous leg ulcer[1,2]
- Promotes self-management thanks to easy handling[1]

Adjustable compression ranges
20 – 30 mmHg

medi travel® Travel socks

People with a healthy venous system do not immediately consider the topic of thrombosis prophylaxis when travelling on holiday or on business. On long car journeys or when flying, however, this is particularly important. Travel socks are an essential part of every travel checklist. They can reduce the risk of traveller's thrombosis[1].
Integrate into your talks to customers the topic of thrombosis prophylaxis when travelling and recommend medi travel socks – as a healthy holiday companion for fit and healthy legs.

[1] Hsieh HF, Lee FP. Graduated compression stockings as prophylaxis for flight-related venous thrombosis: systematic literature review. J Adv Nurs 2005;51(1):83-98.

medi travel®
men

The sporty travel socks for HIM.

Features

- Opaque knee-high stocking in attractive ribbed look
- Controlled, upwardly decreasing pressure distribution
- Can reduce the risk of travel thrombosis[1]
- Extra-soft material with reinforced sole
- Comfortable cuff
- Clima Comfort: for the rapid removal of moisture from the skin's surface and high breathability
- For people with a healthy venous system
- Cannot be prescribed

Washing instructions

medi accessories

medi offers medical compression stockings for the round and flat knit sector as well as complementary products. The skin, in particular, is always eager for special care when it comes to compression therapy. Do your customers complain about itchy or dry skin? Recommend the care products from medi. These have been specially designed for vein and oedema patients and pamper the skin thanks to their precious design characteristics.

Care products for compression stockings protect the fabric and ensure a long service life for the stocking as well as caring for the skin.

Do your customers need help putting on their medical compression stockings? There are different aids for donning and doffing medical compression stockings, which make their daily use that much easier.

medi skin care

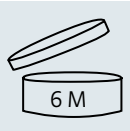
Offer your customers more, such as silky smooth skin during compression treatment.

medi's skin care products have many beneficial ingredients. They are the perfect accompaniment to venous treatment and ensure nourished, healthy skin.

Medical compression stockings are the main component of venous treatment. Proper skin care is an important part of treatment, since the garments are generally worn every day. This can stress the skin. The medi skin care products are specially designed for compression treatment and keep the skin balanced.

An important tip for patients with allergies:
All products meet the highest demands and are produced free of parabens (preservatives) and wool fat alcohols.

The medi care products do not have a use-by or expiry date. They are marked with an „opened tub" and a month. This means that as soon as the tube has been opened and the contents are being used, the product should be used within 6, 9, or 12 months, as with shower gels, shampoos, etc.



Note

medi day, medi fresh and medi soft are not available to all countries.

medi care products are cosmetic products and may only be used on intact skin.

medi day – cooling gel with horse chestnut
